

Conflict of Interest

BJD requires that all authors disclose any potential sources of conflict of interest. Editors may use information disclosed in conflict-of-interest statements as a basis for editorial decisions.

For all manuscript submissions, regardless of article type, all contributing authors should submit a conflict of interest form at the time of submission and within the acknowledgments section of the manuscript itself. If authors have no relevant conflicts of interest to disclose, this should also be declared. It is the responsibility of the corresponding author to review this policy with all authors and collectively to disclose with the submission ALL pertinent commercial and other relationships.

Examples of potential conflict of interest include:

- Employment, membership on the board of directors, or any fiduciary relationship with a third-party entity engaged in the development, manufacture, or sale of pharmaceutical or medical devices, supplies, or information;
- Ownership of stock or receipt of honoraria, travel or meeting expenses, or consulting or review fees from a third-party entity, as described above;
- Receipt of financial support or grants for research from a third-party entity, as described above;
- Holding patents or receiving royalties related to the development of pharmaceutical or medical devices, supplies, or information;
- Receipt of writing assistance, medicines, medical devices, materials, equipment, or administrative support from a third-party entity, as described above;
- Membership on a scientific advisory panel or other standing scientific/medical committee;
- Receipt of payment or honoraria for author contributions or author designation; and
- Any other relationships that readers could perceive to have influenced, or that give the appearance of potentially influencing, the content of the submitted work.

If the study was sponsored by a third party, authors should describe the role of the study sponsor in study design; collection, analysis, and interpretation of data; writing the report; and the decision to submit the report for publication. If the supporting source had no such involvement, the authors should so state.
